Cataracts Never Saw Us Coming

Dr. Harold R. Katz, M.D., of Barenburg Eye Associates is revolutionizing the way cataract patients see the world. Dr. Katz is performing an advanced surgery that reduces operating and healing times so patients can see all that life has to offer.

Topical Clear Corneal Cataract Surgery is a low-risk, highly-effective procedure that produces rapid and remarkable vision improvement. Some patients may be candidates for intraocular lens implants that allow them to see distance and read without glasses.

This progressive, high-tech surgery is performed at Towson Surgical Center, a premier outpatient surgical facility offering quality, convenient, surgical procedures at a fraction of the cost of a hospital.

Topical Clear Corneal Cataract Surgery:

- *New intraocular lens technology allows many patients to drive, use the computer and read without glasses*
- *Eye drops are the only anesthetic needed*
- *The cataract is removed through a tiny incision in the eye less than 1/8 of an inch in size*
- *The intraocular lens implant is rolled up and inserted into the eye through the same tiny opening (no stitches required)*
- *Patients report better vision almost immediately*
